**Reference: Friendship Trail Demolition Project**

Dear Paul,

On July 30, 2016 Hillsborough County issue the certificate of completion for the demolition of the Friendship Trail Bridge. The removal of the 13,770 feet long bridge was completed three months earlier than the contract completion date. Prime Marine was an integral part of project team that enabled the safe and successful completion of the project.

American Bridge selected the Prime 24" hydraulic shear to cut the concrete piles that supported the bent caps. The performance of the Prime 24" hydraulic shear was outstanding. During the demolition of bridge, the Prime 24" hydraulic shear was used to cut over 1200- 18"x 18" concrete piles and remove 252- concrete bent caps. Prime Marine's customer service was above and beyond what we typically see with equipment vendors. Prime Marine minimized any idle equipment cost by responding immediately to service calls.

Prime Marine Services will continue to be American Bridge's first choice when considering the use of hydraulic concrete or steel cutting tools.

Sincerely,

*Ray Hagen*
